
HEAVY EQUIPMENT & MATERIAL HANDLING GRIPS

OTTO specializes in custom-engineering and manufacturing controls solutions, and we can consult with you when your application requires different styles or features than our standard grips. Utilizing our in-house engineering capabilities and state-of-the-art 3D solid modeling technologies, OTTO turns your requirements into custom solutions with unique looks and functions.

OTTO can manufacture grips and joystick base/grip assemblies to specification with thousands of options for switches, termination, mounting and more. Contact the factory for custom design information.

Rugged, customizable grip types, which can be outfitted with a wide variety of pushbuttons, thumbwheels, rockers and other switches, include:

- Heavy Equipment and Material Handling Grips
- Tractor Grips
- Agricultural Grips

G3 Contour Grips

The ergonomically design of OTTO Contour Grips came directly from feedback from machine operator tests, and the user-friendly shape was developed to reduce fatigue and muscle strain. Customers sometimes choose to install the left- and right-handed models adjacent to each other on the operator armrests for two-handed operation. These are ideal for forestry, agriculture, construction and industrial applications.

- Left- and right-handed models
- Soft Touch version available
- Customizable switch configurations on the front, side and back
- Use standalone or mounted on an OTTO Hall effect joystick

STG3 Soft Touch Grips

This rugged, thermoplastic grip is comfortable and soft to the touch for long use in harsh environments. These grips are well suited for heavy equipment and material handling applications.

- Ergonomic design
- Left, right or universal orientation
- Custom options include switch configuration, termination and mounting
